Profile

DevOps Engineer with a background in software development and cybersecurity, now focused on building secure, reliable, and automated cloud infrastructure. I have hands-on experience with AWS, Kubernetes, Terraform, Docker, CI/CD and observability, and I enjoy turning manual processes into repeatable, well-structured solutions. I am AWS Solutions Architect Associate and CKA certified, with practical experience designing EKS environments, deployment pipelines, monitoring systems, and cloud-native infrastructure.

Skills

- **Cloud:** AWS
- **Containers:** Docker, Kubernetes, Helm, Istio
- **Infrastructure as Code:** Terraform
- **CI/CD:** GitHub Actions, Argo CD
- **Observability:** Prometheus, Grafana, OpenTelemetry, Jaeger, Elasticsearch, Fluent Bit, Kibana
- **Systems:** Linux, Git

Professional Experience

Tkxel

Software Engineer | Feb 2022– Jan 2024

- Conducted **30+ technical knowledge-sharing sessions** to promote engineering best practices.
- Developed a configurable asset-management system supporting **25,000+ component combinations**.
- Built real-time event and notification services supporting **80+ concurrent events**.
- Automated simulation and configuration workflows using dynamic asset attributes and business rules.

NOBORDER.z INNOVATION

Associate Software Engineer | Nov 2020 – Jan 2022

- Designed a scalable catalogue and inventory system supporting **10,000+ configurable assets**.
- Built distributed voice and text communication capabilities for concurrent users.
- Developed a remote content-delivery system that enabled new assets and environments to be released without client-side updates.

Projects

Production-Grade DevSecOps Platform on AWS EKS

AWS, EKS, Terraform, Kubernetes, Docker, CI/CD, Argo CD, DevSecOps

- Provisioned an AWS EKS platform with Terraform, including a multi-AZ VPC, managed node groups, Pod Identity, ALB ingress and S3/DynamoDB remote state.
- Built QA and production CI/CD workflows with 7+ security and quality controls, including Gitleaks, Checkov, Trivy, SonarQube and SBOM generation.
- Deployed a Node.js/MySQL application across 2 isolated namespaces with EBS storage, GitOps delivery and namespace-scoped secrets from AWS Secrets Manager.

OpenTelemetry Microservices Platform on AWS EKS

AWS, EKS, Terraform, Kubernetes, Docker, CI/CD, GitOps, OpenTelemetry

- Deployed a cloud-native microservices application to Amazon EKS using modular Terraform and Kubernetes manifests.

- Structured reusable infrastructure for 3 environments—development, QA and production—with S3 remote state and DynamoDB locking.
- Created 3 CI workflows covering Terraform validation, Kubernetes manifest checks, application testing, image publishing and automated manifest updates.

Certification

- [AWS Certified Solution Architect - Associate](#)
- [Certified Kubernetes Administrator \(CKA\)](#)

Education:

- **Master's in Cybersecurity and Digital Forensics**
University of Huddersfield (2024-2025)
- **Bachelor's in information technology**
University of Education (2016-2020)
